

AMENDMENTS TO THE ABSTRACT

Please delete the abstract in its entirety and replace therefor the following:

A nondestructive inspection apparatus using a guided wave having waveform forming part that form a transmission waveform; a transmitting element for generating a guided wave within an object under inspection; a receiving element for receiving a reflection wave of the guided wave from an inspection region of the object under inspection; an analyzing element for outputting inspection information which is acquired based upon the reception waveform of the reflection wave received by the receiving element; and a display for displaying the inspection information.
